Dino Catchers

65 million years ago dinosaurs roamed the world. 8 million years later an asteroid bigger than earth hit the planet, but most of the dinosaur's survived the hit. On the other hand, the carnatorus species did not make it.

57 million years in the future lived civilized people who invented the minute machine which is just a different name for the time machine. They tested it and ended up going to the Jurassic period where they ended up fighting with the dinosaurs. The dinosaurs lost and ended up hunting every dinosaur to extinction. But one dinosaur went back through the portal.
