# TASTE

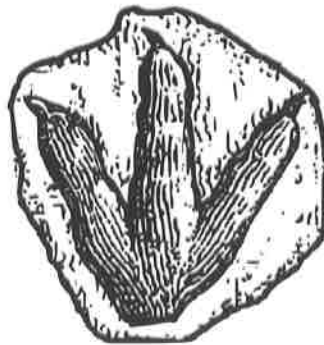

Herbivores are dinosaurs that eat plants,  
And when they are full they like to dance.

Carnivores eat meat,  
When they want to tap their feet.

Omnivores eat plants and meat,  
And it makes their meal complete.

Diplodocus like to eat plants,  
When it wants to prance.

T-Rex likes to eat meat,  
Bon Appetit!

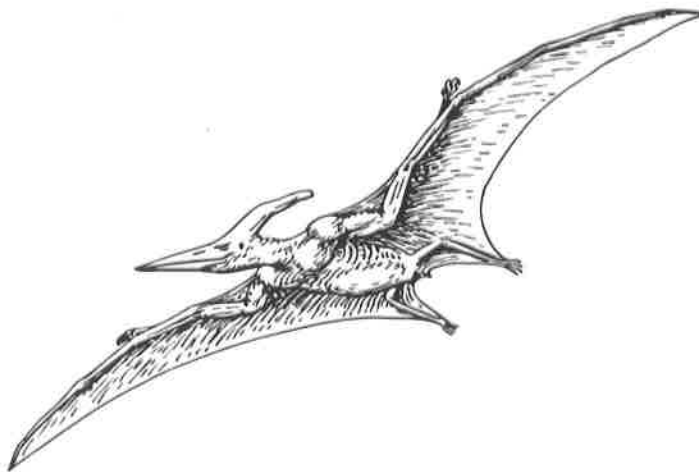

# SMELL

When a dinosaur tries to find its prey,  
"Dear prey, dear prey please come this way".  
It uses its nose to sniff it out,  
"Come out, come out".  
It follows a scent that leads the way,  
Let's go find the prey.  
The smell is strong and leads a trail,  
The trail leads the way to a female.

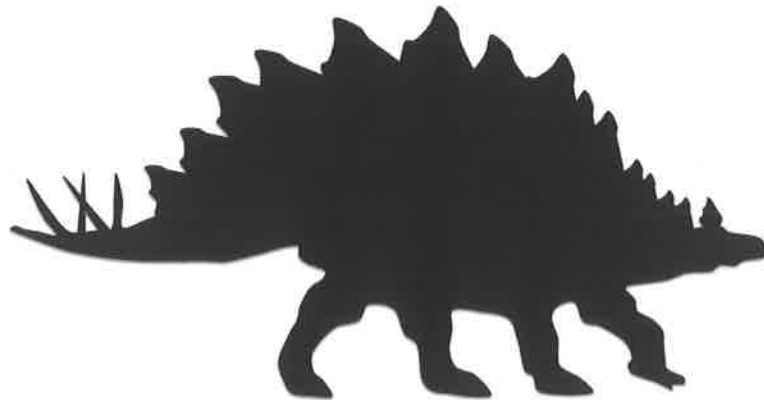

# SOUND

Through the forest you hear a roar,  
You hear the triceratops stomp on the floor.  
The leaves make noise as the wind blows,  
The river makes a hard noise as it flows.  
A Pterodactyl makes a screech as it flies,  
When it flaps its wings it makes a noise through the sky.  
If you listen close you will hear a howl,  
A Stegosaurus likes to growl.

# TOUCH

A T-Rex has scales,  
And they feel like nails.  
The feathers on a Velociraptor feel fluffy,  
They sort of feel like leaves on a tree.  
The plates of a Stegosaurus feel rough,  
When it wants to get tough.  
I touch the leaves on a tree,  
And it makes me feel free.

# SIGHT

I see an Ankylosaurus as he eats,  
While he eats he eats the beets.

I see a Pteranodon soaring through the sky,  
When he likes to fly.

A Diplodocus looks up high over the trees,  
And I wish I could see all of the things that it sees.

A Mosasaur sees a fish,  
It wants to put it on its dish.
