Unit 1- Algebraic Thinking: Real-World Addition & Subtraction of Multi-Digit #'s

<u>General Description of the Unit</u>	
<ul style="list-style-type: none">• Place Value• Comparing Numbers• Adding and Subtracting Multi-Digit Numbers• Solve Real World Problems involving these concepts	
<u>Priority Standards</u> <ul style="list-style-type: none">• 4.AT.1 Solve real-world problems involving addition and subtraction of multi-digit whole numbers (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem).	<u>Supporting Standards</u> <ul style="list-style-type: none">• 4.C.1 Add and subtract multi-digit whole numbers fluently using a standard algorithmic approach.• 4.NS.1 Read and write whole numbers up to 1,000,000. Use words, models, standard form and expanded form to represent and show equivalent forms of whole numbers up to 1,000,000.• 4.NS.2 Compare two whole numbers up to 1,000,000 using $>$, $=$, and $<$ symbols.• 4.NS.9 Use place value understanding to round multi-digit whole numbers to any given place value.• 4.AT.6 Describe a relationship between two variables and use to find a second number when a first number is given. Generate a number pattern that follows a given rule.
<u>Proficiency Scales</u> <u>4.AT.1</u>	<u>Tiered Assessments</u> <u>4.AT.1</u>

<p><u>Enduring Understandings</u></p> <ul style="list-style-type: none"> • The digits in a number represent different place-values. • Numbers can be rounded to help us estimate and determine reasonableness of computations. • There is a time for estimation and precision in math. • Adding and subtracting are essential skills that are necessary to be successful in 21st century workforces. • There are a variety of methods to demonstrate how to add or subtract. • Adding and subtracting fluently does not necessarily mean adding and subtracting quickly. It means being able to approach problems with the flexibility of working for a solution in a variety of ways. 		<p><u>Essential Questions</u></p> <ul style="list-style-type: none"> • Why is it important to understand and use place-value? • What is a real-world example of 824,567? What is an example that makes this number seem small? What is an example that makes this number seem big? What would it be impossible to represent with 824,567? What would it be reasonable to represent with 824,567? • How many specific examples can you identify in the real-world in which you would choose to round numbers? • How are addition and subtraction related to one another? • Can you think of a real-world problem to represent the addition problem $864 + 78 = \underline{\quad}$? Can you think of a real-world problem to represent the problem $364 - \underline{\quad} = 56$?
<p><u>Key Concepts</u></p> <ul style="list-style-type: none"> • I can use drawings to solve real-world problems that involve adding or subtracting multi-digit whole numbers. • I can use equations that include a variable to solve real-world addition and subtraction problems of multi-digit whole numbers. 	<p><u>Related Concepts</u></p> <ul style="list-style-type: none"> • I can fluently add multi-digit whole numbers using a standard algorithm. • I can fluently subtract multi-digit whole numbers using a standard algorithm. • I can create a number pattern that follows a given rule. • I can show that an equation with two variables is a rule that describes 	<p><u>Assessment Vocabulary</u></p> <ul style="list-style-type: none"> • Variable • Equation • Algorithm • Number pattern • Word form • Standard form • Expanded form • Equivalent • Compare • Greater than • Less than

	<p>the relationship between the variables.</p> <ul style="list-style-type: none"> • When given one variable in a two-variable equation, I can solve the equation for the second variable. • I can read and write numbers written in both standard and word form up to 1,000,000. • I can represent whole numbers to 1,000,000 in standard, word, and expanded form, and by using models. • I can show numbers as equivalent in standard, word, and expanded form. • I can compare numbers up to 1,000,000 using greater than, less than, and equal to symbols. • I can round whole numbers to any given place value. 	<ul style="list-style-type: none"> • Equal • Whole number • Round • Place value
<p><u>Mathematical Processes</u></p> <ul style="list-style-type: none"> • PS.1: Make sense of problems and persevere in solving them. • PS.2: Reason abstractly and quantitatively. • PS.4: Model with mathematics. 		<p><u>Employability Skills</u></p> <ul style="list-style-type: none"> • 3-5.WE.5 Demonstrate perseverance to complete tasks and activities. • 3-5.WE.3 Apply understanding of independence to complete tasks. • 3-5.LS.12 Complete activities and assignments by following directions closely.

Unit 2- Algebraic Thinking: Real-World Problems With Multiplicative & Additive Comparisons

General Description of the Unit

- Multiplication Fluency/Comparisons
- Commutative and Associative Properties
- Multi-Digit Multiplication (up to 4 digits x 1 digit)
- Solve Real-World Problems Involving Multiplicative Comparisons

Priority Standards

- **4.AT.4** Solve real-world problems with whole numbers involving multiplicative comparison (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem), distinguishing multiplicative comparison from additive comparison. [In grade 4, division problems should not include a remainder.]

Supporting Standards

- **4.AT.3** Interpret a multiplication equation as a comparison (e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7, and 7 times as many as 5). Represent verbal statements of multiplicative comparisons as multiplication equations.
- **4.C.2** Multiply a whole number of up to four digits by a one-digit whole number and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Describe the strategy and explain the reasoning.
- **4.C.4** Multiply fluently within 100.
- **4.C.7** Show how the order in which two numbers are multiplied (commutative property) and how numbers are grouped in multiplication (associative property) will not change the product. Use these properties to show that numbers can be multiplied in any order. Understand and use the distributive property.

<u>Proficiency Scales</u> <u>4.AT.4</u>		<u>Tiered Assessments</u> <u>4.AT.4</u>	
<u>Enduring Understandings</u> <ul style="list-style-type: none"> • Multiplication can represent equal groups, multiplicative comparison, and repeated addition. • Multiplication has inverse relationships with addition and division. • When multiplying large numbers, partial products are found and utilized, and developing number sense with these partial products is imperative. • Having strategies and quick recall of factors, multiples, and multiplication facts will create efficiency in solving multiplication problems. 		<u>Essential Questions</u> <ul style="list-style-type: none"> • What is multiplication? Describe all you know about multiplication and how it is used in the real world. • Solve the problem 31×25 in two different ways. Which method do you prefer; why? How are your two methods related to one another? • Consider the problem 52×63. What is a reasonable product; why? What is an unreasonably low product; why? What is an unreasonably high product; why? What is a reasonable real-world problem that could be represented by 52×63? 	
<u>Key Concepts</u> <ul style="list-style-type: none"> • I can use drawings or symbols to help me solve real-world problems that involve multiplicative comparison. • I can tell the difference between multiplicative comparison and additive comparison. 	<u>Related Concepts</u> <ul style="list-style-type: none"> • I can interpret a multiplication equation as a comparison (See example in standard). • I can represent verbal statements of multiplicative comparisons as multiplication equations. • I can multiply two, two digit whole numbers using appropriate strategies. • I can multiply a four digit number by a one digit number using appropriate strategies. 	<u>Assessment Vocabulary</u> <ul style="list-style-type: none"> • Equation • Variable • Multiplicative Comparison • Additive Comparison • Product • Factor • Whole number • Place value • Multiple • Commutative Property of Multiplication • Associative Property of Multiplication • Distributive Property 	

	<ul style="list-style-type: none">• I can describe and explain my method of solving multiplication problems.• I can select appropriate strategies to multiply numbers within 100.• I can show that multiplying numbers in any order will produce the same product.• I can show that grouping numbers in any order and then multiplying them will produce the same product.• I can use and explain the distributive property.	
<u>Mathematical Processes</u> <ul style="list-style-type: none">• PS.2: Reason abstractly and quantitatively.• PS.3: Construct viable arguments and critique the reasoning of others.• PS.4: Model with mathematics.		<u>Employability Skills</u> <ul style="list-style-type: none">• 3-5.LS.13 Utilize effective questioning and brainstorming techniques.• 3-5.WE.6 Begin to take steps to organize and prioritize tasks.• 3-5.M.1 Begin to ask questions when receiving feedback.

Unit 4- Number Sense: Fraction Equivalence and Comparison

General Description of the Unit

- Equivalent Fractions
- Whole Numbers as Fractions
- Mixed Numbers and Improper Fractions
- Comparing Fractions

Priority Standards

- **4.NS.3** Express whole numbers as fractions and recognize fractions that are equivalent to whole numbers. Name and write mixed numbers using objects or pictures. Name and write mixed numbers as improper fractions using objects or pictures.
- **4.NS.5** Compare two fractions with different numerators and different denominators (e.g., by creating common denominators or numerators, or by comparing to a benchmark, such as 0, $\frac{1}{2}$, and 1). Recognize comparisons are valid only when the two fractions refer to the same whole. Record the results of

Supporting Standards

- **4.NS.4** Explain why a fraction, $\frac{a}{b}$, is equivalent to a fraction, $\frac{(n \times a)}{(n \times b)}$, by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions. [In grade 4, limit denominators of fractions to 2, 3, 4, 5, 6, 8, 10, 25, 100.]

comparisons with symbols $>$, $=$, or $<$, and justify the conclusions (e.g., by using a visual fraction model).			
<u>Proficiency Scales</u> 4.NS.3 4.NS.5		<u>Tiered Assessments</u> 4.NS.3 4.NS.5	
<u>Enduring Understandings</u> <ul style="list-style-type: none"> Improper fractions and mixed numbers are related and representations can be converted between to simplify computations. All fractions can be compared using multiple strategies based in number sense. Equivalent fractions represent the same fractional amount with different numbers, and can be useful in fraction comparisons and computations. 		<u>Essential Questions</u> <ul style="list-style-type: none"> How are mixed numbers and improper fractions the same? How are they different? When would you see each in the real world? Fast food chains conducted customer research to figure out why quarter-pound burgers were selling more than third-pound burgers even though taste and price were not factors. Why do you think this may have been the case? How would you convince a customer which burger they should buy? (Related Article) What is the purpose of finding equivalent fractions? What is a real-world example of how an equivalent fraction would be helpful in some way? 	
<u>Key Concepts</u> <ul style="list-style-type: none"> I can express whole numbers as fractions. I can use objects and pictures to name and write mixed numbers. I can recognize fractions equivalent to whole numbers. 	<u>Related Concepts</u> <ul style="list-style-type: none"> I can use visual fraction models to explain why one fraction is equivalent to another. I can show that even though the number and size of the parts of two fractions may differ, the fractions themselves are the same size. 	<u>Assessment Vocabulary</u> <ul style="list-style-type: none"> Fractions Whole number Mixed number Improper fraction Numerator Denominator Benchmark Common denominator 	

<ul style="list-style-type: none"> • I can use objects and pictures to name and write mixed numbers as improper fractions. • I can explain that comparing 2 fractions must refer to the same whole. • I can compare 2 fractions by reasoning about their size. *I can compare 2 fractions by creating equivalent fractions with a common denominator. • I can order fractions using $<$, $>$, and $=$ and justify the comparison. 	<ul style="list-style-type: none"> • I can generate and recognize equivalent fractions. 	<ul style="list-style-type: none"> • Unlike fractions • Greater than • Less than • Equal • Equivalent fractions

Unit 5- C/NS/AT: Addition & Subtraction of Fractions, Decimal Equivalents & Mixed Numbers

General Description of the Unit

- Add and Subtract Fractions with Common Denominators
- Add and Subtract Mixed Numbers with Common Denominators
- Tenths and Hundredths in Decimal and Fraction Notations/Compare
- Solve Real-World Problems Involving Adding and Subtracting Fractions

Priority Standards

- **4.C.6** Add and subtract mixed numbers with common denominators (e.g. by replacing each mixed number with an equivalent fraction and/or by using properties of operations and the relationship between addition and subtraction).
- **4.NS.6** Write tenths and hundredths in decimal and fraction notations. Use words, models, standard form and expanded form to represent decimal numbers to hundredths. Know the fraction and decimal equivalents for halves and fourths (e.g., $1/2 = 0.5 = 0.50$, $7/4 = 1\ 3/4 = 1.75$).
- **4.AT.5** Solve real-world problems involving addition and subtraction of fractions referring to the same whole and having common denominators (e.g., by using visual fraction models and equations to represent the problem).

Supporting Standards

- **4.C.5** Add and subtract fractions with common denominators. Decompose a fraction into a sum of fractions with common denominators. Understand addition and subtraction of fractions as combining and separating parts referring to the same whole.
- **4.NS.7** Compare two decimals to hundredths by reasoning about their size based on the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions (e.g., by using a visual model).

Unit 7- Geometry: Ray, Angles & Lines within 2-D Figures

General Description of the Unit

- Rays, Angles with Reference to Circles
- Measuring Angles in Whole Number Degrees
- Angles as Geometric Shapes
- Parallelograms, Rhombuses and Trapezoids
- Classifying Triangles and Quadrilaterals Based on Perpendicular Parallel Lines
- Symmetry

Priority Standards

- **4.G.4** Identify, describe, and draw rays, angles (right, acute, obtuse), and perpendicular and parallel lines using appropriate tools (e.g., ruler, straightedge and technology). Identify these in two-dimensional figures.

Supporting Standards

- **4.M.5** Understand that an angle is measured with reference to a circle, with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. Understand an angle that turns through $\frac{1}{360}$ of a circle is called a “one-degree angle,” and can be used to measure other angles. Understand an angle that turns through n one-degree angles is said to have an angle measure of n degrees.
- **4.M.6** Measure angles in whole-number degrees using appropriate tools. Sketch angles of specified measure.
- **4.G.3** Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint.
- **4.G.1** Identify, describe, and draw parallelograms, rhombuses, and trapezoids using appropriate tools (e.g., ruler, straightedge and technology).

			<ul style="list-style-type: none"> ● 4.G.5 Classify triangles and quadrilaterals based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles (right, acute, obtuse). ● 4.G.2 Recognize and draw lines of symmetry in two-dimensional figures. Identify figures that have lines of symmetry.
<u>Proficiency Scales</u> <u>4.G.4</u>			<u>Tiered Assessments</u> <u>4.G.4</u>
<u>Enduring Understandings</u> <ul style="list-style-type: none"> ● While an angle is formed when two rays intersect at a single point, a polygon is formed when a minimum of three angles intersect with one another. ● Many everyday objects are formed from geometric shapes. ● Geometric shapes such as triangles, squares, rectangles, parallelograms, and rhombuses can be categorized in multiple ways. 			<u>Essential Questions</u> <ul style="list-style-type: none"> ● How can shapes be described, compared, and combined to form other shapes? ● What geometric shapes can you identify in the classroom? In the school? In your house? In other places you see and visit throughout your life? ● What strategies can you apply to use a ruler or a straightedge? What strategies can you apply to use a compass? Can you teach one of your classmates to apply these strategies to draw polygons?
<u>Key Concepts</u> <ul style="list-style-type: none"> ● I can use tools and technology to draw rays, angles, perpendicular, and parallel lines. ● I can describe and identify rays, right, acute, and obtuse angles, and perpendicular and parallel lines. 	<u>Related Concepts</u> <ul style="list-style-type: none"> ● I can use tools and technology to draw parallelograms, rhombi, and trapezoids. ● I can describe and identify parallelograms, rhombi, and trapezoids. 	<u>Assessment Vocabulary</u> <ul style="list-style-type: none"> ● Ray ● Angle ● Right angle ● Acute angle ● Obtuse angle ● Parallel lines ● Ruler 	

<ul style="list-style-type: none"> ● I can find rays, angles, perpendicular, and parallel lines in two-dimensional shapes. 	<ul style="list-style-type: none"> ● I can draw lines of symmetry on a two-dimensional figures. ● I can recognize a line of symmetry on a two-dimensional figure. ● I can identify figures that have lines have symmetry. ● I can show that angles are shapes which are made when two rays have the same endpoint. ● I can classify triangles as right, acute, or obtuse. ● I can classify quadrilaterals based on the presence or absence of parallel and perpendicular lines and by the presence or absence of right, acute, or obtuse angles. ● I can explain how angles are measured in reference to a circle, with the endpoint of the rays being at the center of the circle. ● I can describe one degree as the fraction $\frac{1}{360}$ of a circle. ● I can explain the connection between degrees and angle measures. ● I can use protractors to help me accurately measure angles. ● I can draw angles with specific measures. 	<ul style="list-style-type: none"> ● Straightedge ● Perpendicular lines ● Parallelogram ● Rhombus ● Trapezoid ● Lines of symmetry ● Two-dimensional ● Symmetry ● Vertex ● Endpoint ● Triangle ● Parallel lines ● Quadrilateral ● Right triangle ● Acute triangle ● Obtuse triangle ● Equilateral triangle ● Isosceles triangle ● Scalene triangle ● Degree ● Vertex ● Protractor
---	---	--

<u>Mathematical Processes</u> <ul style="list-style-type: none">● PS.5: Use appropriate tools strategically.● PS.6: Attend to precision.● PS.7: Look for and make use of structure.	<u>Employability Skills</u> <ul style="list-style-type: none">● 3-5.WE.6 Begin to take steps to organize and prioritize tasks.● 3-5.LS.11 Complete assignments, projects, and activities with some redirection from teachers, mentors, or supervisors.● 3-5.WE.5 Demonstrate perseverance to complete tasks and activities.
