Green: Priority Standards Pink: Supporting Standards

## Unit 1- Number Sense to $\mathbf{1 , 0 0 0}$

## General Description of the Unit

Students will kick off the year with a review of number sense. Students will expand their base-ten number system by reading and writing whole numbers up to 1,000 and using words, models, and expanded form to represent these numbers. They will plot and compare numbers on a number line. Students will use place value to understand that three digits of a three-digit number represent amounts of hundreds, tens, and ones and match ordinal numbers with sets up to 30 .

## Priority Standards

- 2.NS.2: Read and write whole numbers up to 1,000 . Use words, models, standard form and expanded form to represent and show equivalent forms of whole numbers up to 1,000 .
- 2.NS.3: Plot and compare whole numbers up to 1,000 on a number line.
- 2.NS.6: Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones (e.g., 706 equals 7 hundreds, 0 tens, and 6 ones). Understand that 100 can be thought of as a group of ten tens - called a "hundred." Understand that the numbers $100,200,300,400,500,600,700,800,900$ refer to one, two, three, four, five, six, seven, eight, or nine hundreds (and 0 tens and 0 ones).

## Supporting Standards

- 2.NS.1: Count by ones, twos, fives, tens, and hundreds up to at least 1,000 from any given number.
- 2.NS.4: Match the ordinal numbers first, second, third, etc., with an ordered set up to 30 items.
- 2.NS.5: Determine whether a group of objects (up to 20) has an odd or even number of members (e.g., by placing that number of objects in two groups of the same size and recognizing that for even numbers no object will be left over and for odd numbers one object will be left over, or by pairing objects or counting them by 2 's).
- 2.NS.7: Use place value understanding to compare two three-digit numbers based on meanings of the hundreds, tens, and ones digits, using $>,=$, and $<$ symbols to record the results of comparisons.

## Proficiency Scales

2.NS. 2
2.NS. 3
2.NS. 6

## Enduring Understandings

- Three-digit numbers are created using groups of hundreds, tens, and ones and can be represented in multiple ways.
- Using number sense, numbers can be compared and ordered.
- Ordinal numbers are used to indicate a position or ranking.
- Numbers that can be evenly divided by 2 are called even numbers. Numbers that cannot be evenly divided by 2 are called odd numbers.

## Essential Questions

- How are the numbers 342 and 423 alike? How are they different?
- What are all of the ways you can think of to represent the number 781? What ways could you represent 781 if you could only use tens and ones?
- What is an example of something where 951 would be a large amount? A small amount? A likely amount? An impossible amount?
- How/when do you use ordinal numbers in your life?

## Key Concepts

- I can read and write numbers to 1,000 in standard form. (2.NS.2)
- I can read and write numbers to 1,000 in word form. (2.NS.2)
- I can read and write numbers to 1,000 in expanded form. (2.NS.2)
- I can use models to represent numbers up to 1,000. (2.NS.2)
- I can show and represent equivalent numbers in in word, standard and expanded form and using models. (2.NS.2)
- I can plot numbers to 1,000 on a number line. (2.NS.3)

## Related Concept

- I can count on by ones from any number up to 1,000. (2.NS.1)
- I can count on by twos from any number up to 1,000. (2.NS.1)
- I can count on by fives from any number up to 1,000. (2.NS.1)
- I can count on by tens from any number up to 1,000. (2.NS.1)
- I can count on by hundreds from any number up to 1,000 . (2.NS.1)
- I can match numbers with their ordinals in an ordered set with up to 30 items. (2.NS.4)
- I can use greater than, less than, and equal to signs to compare two, three digit numbers. (2.NS.7)

## Assessment Vocabulary

- Compare
- Count on
- Equal
- Equivalent numbers
- Even
- Expanded form
- Greater than
- Hundreds
- Less than
- Number line
- Odd
- Ones
- Ordinal
- Place Value
- Plot
- Standard form
- I can use a number line to compare numbers up to 1,000 . (2.NS.3)
- I can understand that the digit in the hundreds place represents how many hundreds are in the number. (2.NS.6)
- I can understand that the digit in the tens place represents how many tens are in the number. (2.NS.6)
- I can understand that the digit in the ones place represents how many ones are in the number. (2.NS.6)
- I can understand that the number 100 can be made by making ten groups of ten. (2.NS.6)
- I can understand that the numbers 100, 200, 300, 400, 500, $600,700,800,900$ refer to one, two, three, four, five, six, seven, eight, or nine hundreds. (2.NS.6)
- I can use place value understanding to compare two,
- Tens
- Word form
three-digit numbers. (2.NS.7)
- I can determine if a group of objects is odd or even. (2.NS.5)
- I can separate an even number of objects up to 20 into two equal groups. (2.NS.5)
- I can separate an odd number of objects into two equal groups with one left over. (2.NS.5)
- I can place an even number of objects into pairs. (2.NS.5)
- I can place an odd number of objects into pairs with one left over. (2.NS.5)
- I can count an even number of objects by 2's. (2.NS.5)
- I can count an odd number of objects by 2's with one left over. (2.NS.5)

## Unit 2- Addition within 100

## General Description of the Unit

Students will solve real-world problems involving addition within 100. They will use a variety of strategies such as adding to, putting together, etc. with unknowns in all parts of the addition problem. Students will use estimation to determine whether answers are reasonable in addition problems.

## Priority Standards

- 2.CA.2: Solve real-world problems involving addition and subtraction within 100 in situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all parts of the addition or subtraction problem (e.g., by using drawings and equations with a symbol for the unknown number to represent the problem). Use estimation to decide whether answers are reasonable in addition to problems.

## Supporting Standards

- 2.CA.:1 Add and subtract fluently within 100.
- 2.CA.3: Solve real-world problems involving addition and subtraction within 100 in situations involving lengths that are given in the same units (e.g., by using drawings, such as drawings of rulers, and equations with a symbol for the unknown number to represent the problem).
- 2.CA.6: Show that the order in which two numbers are added (commutative property) and how the numbers are grouped in addition (associative property) will not change the sum. These properties can be used to show that numbers can be added in any order.

## Unit 3- Addition within $\mathbf{1 , 0 0 0}$

## General Description of the Unit

Students will add within 1,000 using models or drawings and strategies based on place value. They will understand that in adding three-digit numbers, one adds hundreds and hundreds, tens and tens, and ones and ones, composing as necessary into tens or hundreds.

## Priority Standards

- 2.CA.4: Add and subtract within 1,000, using models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; describe the strategy and explain the reasoning used. Understand that in adding or subtracting three-digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones, and that sometimes it is necessary to compose or decompose tens or hundreds.

## Supporting Standards

- 2.CA.6: Show that the order in which two numbers are added (commutative property) and how the numbers are grouped in addition (associative property) will not change the sum. These properties can be used to show that numbers can be added in any order.
- 2.CA.7: Create, extend, and give an appropriate rule for number patterns using addition and subtraction within 1,000.

| - I can describe and explain strategies used to add within 1,000. (2.CA.4) <br> - I can show that when adding, I perform the given operation on digits in matching place values. (2.CA.4) <br> - I can use regrouping to add within 1,000. (2.CA.4) | - I can show that numbers can be added in any order. (2.CA.6) <br> - I can create number patterns for addition within 1,000. (2.CA.7) <br> - I can extend number patterns for addition within 1,000. (2.CA.7) <br> - I can state rules for number patterns using addition within 1,000. (2.CA.7) | - Sum |

## Unit 4- Geometry- Shapes

## General Description of the Unit

Students will identify, describe, and classify two- and three-dimensional shapes according to the number of sides, vertices, and/or faces. In addition. students will be able to draw two-dimensional shapes.

## Priority Standards

- 2.G.1: Identify, describe, and classify two- and three-dimensional shapes (triangle, square, rectangle, cube, right rectangular prism) according to the number and shape of faces and the number of sides and/or vertices. Draw two-dimensional shapes.

## Supporting Standards

- 2.G.2: Create squares, rectangles, triangles, cubes, and right rectangular prisms using appropriate materials.
- 2.G.3: Investigate and predict the result of composing and decomposing two- and three-dimensional shapes.

|  |  |

| Proficiency Scales | $\underline{\text { Tiered Assessments }}$ |
| $\underline{\text { 2.G.1 }}$ |  |
| $\underline{\text { Enduring Understandings }}$ | $\underline{\text { Essential Questions }}$ |

- Objects can be identified based on their geometric attributes.
- Objects can be described and classified based on their geometric attributes.
- Composites can be formed by combining shapes.
- New shapes can be made by decomposition.
- Two-dimensional shapes have length and width, and three-dimensional shapes add the dimension of height.
- What are all the ways you can describe this box of tissues to someone that couldn't see it?
- If you know that a shape has four sides and four vertices, how would you prove if that shape is a square or a rectangle?
- Other than drawing shapes using a pencil and a ruler, how else can you create two- and three-dimensional shapes?
- When composing and decomposing a shape, how many new geometric shapes can you create?
- Where in our classroom/your home/your neighborhood do you see an example of a $\qquad$ ?

## Key Concepts

- I can identify two- and threedimensional shapes. (2.G.1)
- I can describe two- and threedimensional shapes. (2.G.1)
- I can classify three-dimensional shapes according to the number and shape of the faces. (2.G.1)
- I can classify two-dimensional shapes according to the number of sides and/or vertices. (2.G.1)
- I can draw two-dimensional shapes. (2.G.1)

## Related Concepts

- I can create squares. (2.G.2)
- I can create rectangles. (2.G.2)
- I can create triangles. (2.G.2)
- I can create right rectangular prisms. (2.G.2)
- I can investigate the impact of decomposing two- and three-dimensional shapes. (2.G.3)
- I can investigate the impact of composing two- and three-dimensional shapes. (2.G.3)
- I can predict the result of composing two and three dimensional shapes. (2.G.3)

## Unit 5- Data Analysis

## General Description of the Unit

Students will draw a picture graph with a single-unit scale to represent data that has four choices. Students will draw a bar graph with a single-unit scale to represent data that has four choices. In addition, students will be able to solve simple math problems using the information in the picture graph and bar graph.

## Priority Standards

- 2.DA.1: Draw a picture graph (with single-unit scale) and a bar graph (with single-unit scale) to represent a data set with up to four choices (What is your favorite color? red, blue, yellow, green). Solve simple put-together, take-apart, and compare problems using information presented in the graphs.

## Proficiency Scales

## Supporting Standards <br> - N/A

## 2.DA. 1

## Enduring Understandings

- Different types of graphs such as picture graphs and bar graphs can be used to visually represent data.
- Graphs can be analyzed to answer questions about data.
- The scale on a graph represents the value of a single box or picture in the graph.

| Key Concepts <br> - I can draw a picture graph. (2.DA.1) <br> - I can draw a bar graph. (2.DA.1) <br> - I can represent data sets that have up to four choices using bar graphs and picture graphs. Unit 6- Subtraction within 100 (Culmination Addition/Subtraction within 100)

## General Description of the Unit

Students will solve real-world problems involving subtraction within 100. They will use a variety of strategies such as taking from, taking apart, comparing, etc. with unknowns in all parts of the subtraction problem. In addition, students will use estimation to determine whether answers are reasonable in subtraction problems.

Students will also practice flexibility with switching between addition and subtraction computation, and distinguishing between addition and subtraction word problems within 100.

## Priority Standards

- 2.CA.2: Solve real-world problems involving addition and subtraction within 100 in situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all parts of the addition or subtraction problem (e.g., by using drawings and equations with a symbol for the unknown number to represent the

Unit 8- Time - Nearest Five Minutes

## General Description of the Unit

Students will tell and write time to the nearest five minutes from an analog clock, using a.m. and p.m. In addition, students will solve real-world problems involving addition and subtraction of time in intervals of half hour or hour.

| Priority Standards <br> - 2.M.5: Tell and write time to the n from analog clocks, using a.m. an problems involving addition and intervals on the hour or half hour | rest five minutes m. Solve real-world traction of time | Supporting Standards <br> - 2.M.6: Describe relationships of time, including: seconds in a minute; minutes in an hour; hours in a day; days in a week; and days, weeks, and months in a year. |  |
| :---: | :---: | :---: | :---: |
| Proficiency Scales $\text { 2.M. } 5$ |  | Tiered Assessments |  |
| Enduring Understandings <br> - Time can be measured in multipl seconds, or hours. <br> - By reading and writing time to th on an analog clock, students can circles, and counting on by fives. <br> - Knowing when to use a.m. and wher provide context when estimating passed. | nits such as minutes, earest five minutes nect partitioning to use p.m. can w much time has | Essential Questions <br> - Time can be measured in multiple units such as minutes, seconds, or hours. <br> - By reading and writing time to the nearest five minutes on an analog clock, students can connect partitioning circles, and counting on by fives. <br> - Knowing when to use a.m. and when to use p.m. can provide context when estimating how much time has passed. |  |
| Key Concepts <br> - I can tell time to the nearest five minutes on an analog clock. (2.M.5) | Related Concepts <br> - I can show how in one minut <br> - I can show how in an hour. Unit 9- Money

## General Description of the Unit

Students will identify the value of a collection of pennies, nickels, dimes, quarters, and dollars.

| Priority Standards <br> - 2.M.7: Find the value of a collection of pennies, nickels, dimes, quarters and dollars. | Supporting Standards <br> - N/A |
| :---: | :---: |
| Proficiency Scales 2.M. 7 | Tiered Assessments |
| Enduring Understandings <br> - The United States uses currency that includes coins such as the penny, nickel, dime, and quarter as well as bills of different values. | Essential Questions <br> - How are pennies, nickels, dimes, and quarters alike? How are they different? <br> - Why is it important to be able to find the value of a collection of money? |

| :--- | :--- | :--- |

## Unit 10- Fractions

## General Description of the Unit

Students will be able to partition circles and rectangles into two, three, or four equal parts. They will describe the shares using the words halves, thirds, half of, etc. In addition, students will describe the whole as having two halves, three thirds, etc.
Students will recognize that equal parts of identical wholes do not have to have the same shape.

## Priority Standards

- 2.G.5: Partition circles and rectangles into two, three, or

## Supporting Standards

- N/A four equal parts; describe the shares using the words halves, thirds, half of, a third of, etc.; and describe the whole as two halves, three thirds, four fourths. Recognize that equal parts of identical wholes need not have the same shape.

| $\begin{aligned} & \text { Proficiency Scales } \\ & \text { 2.G. } 5 \end{aligned}$ |  | Tiered Assessments |
| :---: | :---: | :---: |
| Enduring Understandings <br> - Shapes can be partitioned in many different ways to represent fractional amounts. <br> - The number of equal-sized pieces that are made through a partition represent a fractional amount such as halves, thirds, and fourths. <br> - Fractions can be written using a numerator and denominator. The denominator represents how many equal-sized pieces the shape is partitioned into, and the numerator represents how many equal-sized pieces are shaded. |  | Essential Questions <br> - How would you describe a fraction? How is it similar to a whole number? How is it different? <br> - When do you use fractions in your life at home or at school? <br> - How many ways can you partition a square into fourths? Why do all of your examples represent fourths? <br> - How do halves and fourths relate to time? How do halves and fourths relate to money? |
| Key Concepts <br> - I can partition circles into two, three, and four equal parts. (2.G.5) <br> - I can partition rectangles into two, three, and four equal parts. (2.G.5) <br> - I can identify halves, thirds, and fourths. (2.G.5) <br> - I can describe partitions of circles and rectangles. (2.G.5) <br> - I can describe a whole as two halves, three thirds, and four fourths. (2.G.5) | Related Concepts <br> - N/A | Assessment Vocabulary <br> - Denominator <br> - Fraction <br> - Numerator <br> - Whole |

## Unit 11- Measurement

## General Description of the Unit

Students will estimate and measure the length of an object. They will choose the appropriate tools of measurement, such as rulers, yardsticks, meter sticks, etc. to measure to the nearest inch, foot, year, centimeter and meter

| Priority Standards <br> - 2.M.2: Estimate and measure the length of an object by selecting and using appropriate tools, such as rulers, yardsticks, meter sticks, and measuring tapes to the nearest inch, foot, yard, centimeter and meter. | Supporting Standards <br> - 2.M.1: Describe the relationships among inch, foot, and yard. Describe the relationship between centimeter and meter. <br> - 2.M.3: Understand that the length of an object does not change regardless of the units used. Measure the length of an object twice using length units of different lengths for the two measurements. Describe how the two measurements relate to the size of the unit chosen. <br> - 2.M.4: Estimate and measure volume (capacity) using cups and pints. |
| :---: | :---: |
| Proficiency Scales | Tiered Assessments |
| Enduring Understandings | Essential Questions |

- Estimating the length of an object can be useful in knowing what tool to use in order to find the exact length of that object.
- The length of an object is identified in same-size units within a system. Therefore an object's length can be measured in different units or different systems, however its length never changes.
- There are smaller and larger units of measure within systems.
- Volume is a different form of measurement from length and area.
- Pints and cups are units of measurement used to find volume. Pints and cups are related measurements, because two cups are equal to one pint.
- Volume can be estimated and measured precisely, and different situations may require estimation or precise measurement.
- About how tall is your classroom chair? A stool at your house? Would you use the same tool to measure their height? Why or why not?
- What examples can you give in which using centimeters would be better than using inches?
- When would it be appropriate to use a ruler instead of a tape measure? When would it be appropriate to use a tape measure instead of a ruler? Explain why one would be more appropriate than the other?
- How would you describe volume? How is it similar to measurements we have been exploring? How is it different?
- When do you need to find the volume of something at home or at school?
- When is it appropriate to estimate and when is it necessary to measure?

## Key Concepts

- I can estimate the length of an object to the nearest inch, foot, yard, centimeter and meter. (2.M.2)
- I can measure to the nearest inch, foot, yard, centimeter, and meter. (2.M.2)

## Related Concepts

- I can understand that the length of an object does not change regardless of how its units of measurement. (2.M.3)
- I can measure the length of an object twice using different units and describe how the two

## Assessment Vocabulary

- Centimeter
- Estimate
- Foot
- Inch
- Length
- Meter
- Metric System
- Unit of Measurement

| - I can use a ruler, yardstick, and meter stick to measure lengths. (2.M.2) | measurements relate to the size of the chosen unit. (2.M.3) <br> - I can estimate volume (capacity) in cups and pints. (2.M.4) <br> - I can measure volume in cups and pints. (2.M.4) | - U.S. Standard System <br> - Yard <br> - Cup <br> - Estimate <br> - Pint <br> - Volume |
| :---: | :---: | :---: |
| Mathematical Processes <br> - PS. 5 Use tools appropriately. <br> o Explain why a particular tool is more suitable than another. <br> - PS. 6 Attend to precision. <br> - Accurately determine the unit of measure of a given problem. |  |  |

## Unit 12- Beginning Multiplication

## General Description of the Unit

Students will combine skills of counting on by ones, two, fives, in order to allow them to visually represent multiplication problems using arrays. They will write simple repeated equations to represent their arrays and also demonstrate how to partition rectangles into rows and columns of same-size units.

## Priority Standards

- 2.CA.5: Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal groups.

## Supporting Standards

- 2.G.4: Partition a rectangle into rows and columns of same-size (unit) squares and count to find the total number of same-size squares.

|  |  |  |  |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Proficiency Scales } \\ & \text { 2.CA. } 5 \end{aligned}$ |  | Tiered Assessments |  |
| Enduring Understandings <br> - Rectangles can be partitioned into smaller, equal-sized rectangles kno <br> - Arrays can be used to connect stud on, multiplication, and division. <br> - Even numbers can be broken apart groups without any objects left ove <br> - Odd numbers can be broken apart groups with one object left over. <br> - When a rectangle is partitioned int each square represents a part of th | ows and columns of wn as arrays. nts to area, counting <br> into equal sized nto equal sized equal sized squares, whole rectangle. | Essential Questions <br> - Does changing the direction of the array change the number of squares or tiles which make up the array? How are they similar? How are they different? <br> - How can we use an array to show counting on by twos or fives? <br> - Can an array have an odd amount of squares or tiles? Why, or why not, explain. |  |
| Key Concepts <br> - I can add to find the total number of objects within a rectangular array up to 5 rows and 5 columns. (2.CA.5) <br> - I can write an equation to show the total as a sum of equal groups. (2.CA.5) | Related Concepts <br> - I can partition a rectangle into squares of equal size. (2.G.4) <br> - After partitioning a rectangle into equal sized squares, I can count the number of same- size squares. (2.G.4) |  | Assessment Vocabulary <br> - Array <br> - Count On <br> - Divide <br> - Even <br> - Fraction <br> - Odd <br> - Pairing <br> - Partition <br> - Remainder |

|  |  | - Sum |
| :---: | :---: | :---: |
| Mathematical Processes <br> - PS. 7 Look for and make use of structure. <br> o Identify patterns or structure in situations. <br> - PS. 8 Look for and express regularity in repeated reasoning. <br> o Notice if calculations are repeated and use that information to solve problems. |  |  |
